zeeshan-portfolio-swart.vercel.app | Pakistan **(Open to Remote)**

PROFESSIONAL SUMMARY

Data Analyst with hands-on experience in Python, SQL, Power BI, and Excel — turning messy data into **business decisions**. Analysed **113,000+** records across **3** real-world projects, uncovering operational bottlenecks and revenue opportunities. Skilled at framing vague business questions into precise investigations and delivering stakeholder-ready recommendations with production-grade BI dashboards (custom DAX, RLS).

CORE SKILLS

Tools & Languages: Python | SQL (PostgreSQL, MySQL) | Power BI | Advanced Excel | DAX | Power Query

Libraries: Pandas | NumPy | Matplotlib | Seaborn | Plotly | SQLAlchemy

Analytics: EDA | RFM Segmentation | KPI Design | Cohort Analysis | Statistical Analysis

BI & Modelling: Star Schema | Time Intelligence | Row-Level Security | Interactive Dashboards

Soft Skills: Business Problem Translation | Stakeholder Communication | Critical Thinking | Remote Collaboration

EXPERIENCE

Data Science & Analytics Intern | *DevelopersHub Corporation* — 2025

Remote, Pakistan

- Built *Superstore Executive Sales Dashboard* in Power BI tracking regional profitability and YoY KPIs with automated PDF executive summaries for C-suite reporting.
- Diagnosed customer churn root causes on telecom & e-commerce datasets via EDA, cohort analysis, and RFM segmentation; automated data cleaning pipelines in Python.

FEATURED ANALYTICS PROJECTS

Olist E-Commerce Operations & Customer Intelligence — 2025

Python · Advanced SQL · Power BI · DAX · RFM Segmentation

- Analysed **113,000+** orders across **9 tables**; reduced memory **60%** via dtype optimisation; engineered *delivery_delta*, *freight_ratio*, *processing_time* to isolate fulfilment bottlenecks.
- **Satisfaction Cliff:** On-time orders average **4.2 stars** vs **2.5** late — logistics, not pricing, drives churn. Custom RFM model (threshold-based; **97%** one-time buyers make quantile scoring invalid) surfaced *Promising* segment at **$400 avg. spend** as top retention target.

github.com/.../Olist

ClassicModels Wholesale SQL Analytics — 2025

MySQL · CTEs · Window Functions · Multi-table Joins

- Answered **7 business questions** with SQL only; Demand-to-Stock ratio revealed **67:1 stockout risk**; LAG() analysis detected **30–50% MoM revenue spike** in November and **70%+** December drop for inventory planning.
- Segmented clients into VIP/Loyal/Standard tiers; surfaced one customer **$33** from tier upgrade as an immediate upsell target.

github.com/.../ClassicModels

Executive Sales Intelligence Dashboard — 2025

Power BI · DAX Time Intelligence · Power Query

- Rebuilt Python/Streamlit v1 into enterprise Power BI on **50,000+** rows; engineered custom YoY DAX (REMOVEFILTERS, MAX context) resolving slicer conflicts.
- **Discounting Trap:** Revenue growth in Tables sub-category masked a margin collapse — invisible in revenue-only reporting.
